Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple visual tool used to understand the needs, behaviours, thoughts, and feelings of users who interact with a system.

For the Automated Network Request Management in ServiceNow project, the empathy map focuses on employees who submit network requests and IT support professionals who process and manage those requests. Understanding their goals, difficulties, and expectations helps identify opportunities to automate request submission, assignment, approvals, tracking, and notifications.

By understanding the user's perspective, the project aims to provide a more efficient, transparent, and user-friendly network request management experience.

Empathy Map – Automated Network Request Management in ServiceNow

Use the following content in the empathy map diagram from your PDF. The map is based on the perspective of your primary user: a network administrator / IT support member.

User Needs and Expectations

The network administrator needs a centralized ServiceNow solution that simplifies network request handling, automatically assigns requests to the appropriate support groups, manages approval workflows, monitors SLAs, and sends notifications when request statuses change.

4. Key Insights

- Automation: Reduce repetitive manual tasks through ServiceNow workflows.
- Transparency: Provide clear request status and assignment information.
- Efficiency: Improve request processing and approval turnaround.
- Accountability: Monitor SLA deadlines and identify delayed requests.
- User Experience: Keep employees informed through automated notifications.

5. How This Empathy Map Supports the Project

The empathy map identifies the challenges and expectations of network administrators and IT users. These insights guide the design of the Automated Network Request Management system in ServiceNow, helping prioritize features such as Service Catalog, automated assignment, approval workflows, SLA management, notifications, and reporting.
