Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	24 September 2026
Team ID	
Project Name	Automated Network Request Management in ServiceNow
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Network Request Submission	Submit network requests through ServiceNow Service Catalog forms; capture request type, description, business justification, and required details.
FR-2	Request Categorization	Categorize requests such as VPN access, firewall changes, IP allocation, and network connectivity; validate mandatory fields.
FR-3	Automated Request Assignment	Automatically assign requests to the appropriate network support group based on request category and predefined assignment rules.
FR-4	Approval Management	Route requests requiring authorization to the appropriate approver; record approval or rejection and update the request status.
FR-5	SLA Management	Define response and resolution targets; monitor request progress and identify SLA breaches.
FR-6	Notifications and Status Tracking	Notify users about request submission, approval decisions, assignment, progress, and closure; allow users to view request status
FR-7	Request Resolution and Closure	Enable support staff to update work notes, record resolution details, and close completed requests.

FR-8	Reports and Dashboards	Display request volumes, pending requests, request status, assignment workload, and SLA performance.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	**Usability**	The system should provide a simple, user-friendly interface that allows employees to submit network requests and track their status with minimal effort.
NFR-2	**Security**	The system should use authentication, role-based access control, and Access Control Lists (ACLs) to ensure that users can access only authorized records and functions.
NFR-3	**Reliability**	The system should process requests consistently, maintain accurate request records, and ensure that configured assignment and approval workflows operate correctly**.**
NFR-4	**Performance**	Request forms, assignment rules, workflows, and reports should be configured efficiently to minimize unnecessary processing and provide timely responses under normal operating conditions.
NFR-5	**Availability**	The application should be accessible through the ServiceNow platform when the platform is available, subject to the applicable service availability commitments and maintenance periods
NFR-6	**Scalability**	The solution should support additional network request categories, approval rules, support groups, and users through configurable ServiceNow components as requirements grow.
